*"We understand hearing loss disconnects you from the people and things you love. Helping provide custom hearing solutions is our goal. Because better hearing means a better life."*

### Testimonial

*"Dr. Dimmick worked with me on putting the hearing aids in, taking them out, changing the batteries, EVERYTHING I need to know...I am able to hear better than I have for over 40 years!" - Lori B.*

### Special Member Benefit

- FREE consultation & hearing test
- \$500 off a treatment plan (requiring instruments for both ears)

Exclusively for Seniors on the Move members!

### Dr. Jessica Dimmick

Dr. Jessica Dimmick is the founder of Hearing Doctors of Iowa. A Midwest native, she grew up in a small farming community in West Central Illinois. Following a bachelor's degree in communication sciences and disorders, she earned a doctorate degree in audiology from the University of Kansas Medical Center.

With a foundation of experience in treating hearing loss, tinnitus, and balance issues, including medically complicated cases and developmental issues in both children and adults, Dr. Dimmick chose to specialize in hearing loss and tinnitus. Treating patients with a long term health condition like hearing loss is a process that deserves to be done right.

## Learn More about Our Hearing Aids

- ▶ Statistics show only 22% of individuals who could benefit from hearing aids actually use them.
- ▶ Your hearing aids should fit you, not the other way around. Hearing testing and hearing aid fittings take precision to make sure your hearing aids fits your unique lifestyle.
- ▶ Cost is determined by features and function. Beware of cheap imitation "hearing aids."
- ▶ Our hearing aids are digital, programmable hearing aids researched and designed by reputable hearing technology manufacturers world-wide.

## Customized Hearing Solutions

Mild hearing impairment can result in asking people to repeat themselves, straining to hear on the phone or in

background noise. Overtime, you may find yourself missing out on the things you love.

Do you feel like you can hear, but you can't understand? Are other people complaining that the TV or radio is turned up too loud? Does it seem like people are mumbling? Does it seem to be harder to hear in background noise or groups?

Even relatively mild hearing loss can seriously disrupt how we interact and connect with others. Ear problems in general can prevent crucial pieces of sound information from reaching the brain, causing frequent misunderstandings.

Understanding your specific needs is crucial to developing the plan for your care, long term. If you are frustrated with your hearing loss or tinnitus, you've found the right place!
